

Global Disaster Relief Summit 2016

Best Practice in Emergency WASH

8 September 2016

Ensuring access to water and sanitation for crisis-affected population

Examples of varied solutions to ensuring WASH access for crisis affected populations in Middle East and Arica

- *Displaced populations in camps*
- *Displaced populations in host communities*
- *Acutely vulnerable non-displaced populations*

Example of Bulawayo cholera response as an opportunity to promote and leverage long term development outcomes and grow local capacity and partnership

Quality requirements and guidelines for drinking water in the field

WV requirements and guidelines:

- Meet WHO guidelines unless country standards are more rigorous
- Testing through government laboratories
- Using portable laboratories where government test results cannot be secured in sufficient time

Examining solutions for water treatment
